TYPOGRAPHY

alkera ai

Wordmark · Courier New, monospace · weight 300 · clamp(2.5rem, 5vw, 4.5rem) · letter-spacing -0.02em

building the future of data intelligence

Tagline · Courier New, monospace · 0.8rem · letter-spacing 0.05em · color: --text-dim

manifold: the next generation ide for data. We build tools that transform how teams interact with their data infrastructure.

Body · Courier New, monospace · 0.85rem · line-height 1.5 · color: --text-dim

contact us at contact@alkera.ai

Small / Contact · Courier New, monospace · 0.75rem · color: --text-dim

Font stack: **'Courier New', monospace**

All text is set in a single monospace typeface.

Hierarchy is created through size, weight, and opacity — never through font changes.

Lowercase only. No capitalization except where grammatically required.

UI COMPONENTS

PRIMARY BUTTON

join waitlist →

TEXT INPUT

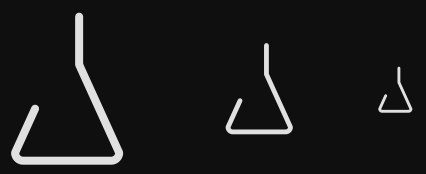
your@email.com

LINK

contact@alkera.ai

Buttons: transparent bg, 1px solid border, 0px border-radius. Hover inverts fill.
Inputs: border-bottom only, no background. Focus brightens border to --text.
Links: underline with 3px offset. Hover brightens to --text.

LOGO / FLASK ICON

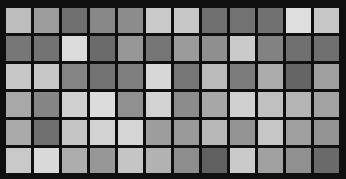


Open flask silhouette, stroke only, no fill. Matches --text color.
Used as favicon (SVG) and animated grid fill on the main site.
Minimum clear space: 1x stroke-width around all sides.

GRID AESTHETIC — VISUAL LANGUAGE

background grid (subtle)

flask cells (bright, active)



structure

The entire viewport is covered by a uniform grid of squares.

Cell pitch: 14px (12px square + 2px gap). The gap is the page background showing through.

Grid aligns to viewport origin (0,0) — all elements snap to the grid.

background layer

Base cells render at #161616 (dark mode) — barely visible against #0f0f0f background.

~4% of cells are randomly selected as "alive" and pulse slowly between brightness 0–0.15.

Alive cells occasionally relocate: fade out → pick new position → fade in.

Animation speed: 0.003–0.01 interpolation per frame. Tick probability: 0.2%.

Effect: a quiet, breathing digital texture across the full viewport.

flask layer

The flask icon is rasterized into the grid — cells inside the SVG path light up.

Brightness range: 0.4–1.0 (much brighter than background).

Each cell has independent flicker: random target brightness, random interpolation speed.

Flip probability: 0.5–1.5% per frame. Speed: 0.015–0.05 per frame.

Effect: the flask appears to shimmer or bubble, like a living data visualization.

color mapping

All cells use a single greyscale formula: `rgb(v, v, v)` where

`v = 22 + brightness × (224 − 22)`

Brightness 0 → #161616 (dark cell), Brightness 1 → #e0e0e0 (full bright).

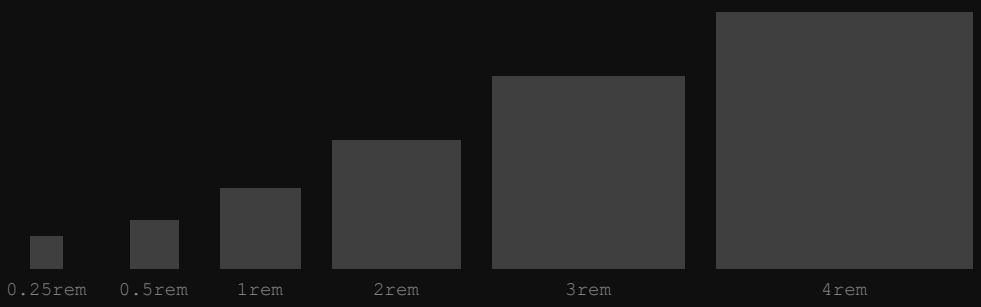
No color is ever introduced. The entire animation is monochrome.

state persistence

Animation state (cell positions + brightness) is saved to sessionStorage on page hide.

On revisit within the same session, the grid resumes from its last state — no jarring reset.

SPACING SCALE



Hero padding: 4rem 3rem (desktop), 1.75rem (mobile).

Section gap: 1rem between info elements. 4rem between columns.

Border-radius: 0 everywhere. Sharp corners only.

USAGE GUIDELINES

DO

+ Use lowercase for all text
+ Maintain monospace typeface throughout
+ Create hierarchy with size and opacity
+ Keep borders at 1px, sharp corners
+ Use greyscale only — no color
+ Let the grid animation provide visual interest
+ Use transparent backgrounds for interactive elements

DON'T

— Introduce color or gradients
— Use rounded corners or border-radius
— Mix typefaces or use sans-serif
— Use uppercase or title case for headings
— Add drop shadows or blur effects
— Use filled/solid buttons as default state
— Break the monochrome grid aesthetic

PITCH DECK & PRESENTATIONS

Monospace works for product UI but reads as raw/unfinished at projection scale.
For decks, investor materials, and conference slides, pair **Inter** (body/headlines) with **Courier New** (wordmark, code snippets, product names only).

HEADLINES & BODY

Inter

Weights: 400 (body), 500 (emphasis), 600 (headlines), 700 (stats/metrics)
Free via Google Fonts. Variable weight supported.
Geometric, neutral, high x-height — reads well on screens and projectors.

BRAND SIGNATURE

Courier New

Use only for: the "alkera ai" wordmark, product names ("manifold"), code snippets, and technical callouts.
Preserves brand DNA without making slides feel like a terminal.

TITLE SLIDE

alkera ai

The Next Generation IDE for Data

Series A · April 2026

CONTENT SLIDE

Why existing tools fall short

Data teams lose 40% of their time context-switching between notebooks, SQL editors, and dashboards. `manifold` unifies these workflows into a single reactive environment.

METRICS SLIDE

3.2x
faster query iteration

40%
less context switching

12k
waitlist signups

slide rules

Background: solid #0f0f0f (dark) or #f5f5f5 (light). No gradients.
The grid texture may be used as a subtle background on title/divider slides only — never behind body text.
One idea per slide. Generous whitespace. Left-aligned, never centered body text.
Stats: Inter 700 at large scale, greyscale only. No pie charts — use bar/line if needed.
Flask icon: top-left corner of every slide at 24px, acts as a logo mark.
Aspect ratio: 16:9. Margins: 80px minimum on all sides.

color in decks

The greyscale-only rule still applies. If you must highlight something, use --text (white/black) against --text-dim (grey).
For charts/diagrams, you may use one accent: **#7a7a7a** as a mid-grey differentiator — never introduce hue.

what not to do

No all-monospace slides. No terminal aesthetic for investor content.
No stock photos. No clip art. Diagrams should use the grid-cell style or simple line art.
No slide transitions or animations beyond a simple fade.

FORMAL DOCUMENTS & PRINT

Contracts, white papers, proposals, and letterhead follow the same Inter + Courier New pairing.
Print defaults to light mode. Documents should feel clean and authoritative, not techy.

Technical White Paper: Reactive Data Environments

Alkera AI Research · April 2026 · Confidential

Abstract — This paper presents the design principles behind `manifold`, a reactive IDE that unifies query authoring, data exploration, and pipeline orchestration into a single environment. We demonstrate a 3.2x improvement in query iteration speed compared to traditional notebook workflows.

document typography

Title: Inter 600, 18–24pt. Body: Inter 400, 10–11pt, line-height 1.6.

Captions/footnotes: Inter 400, 8–9pt, color --text-dim.

Code/product names: Courier New inline, same size as surrounding body text.

Page headers: flask icon (16px) + "alkera ai" wordmark in Courier New, separated by a 1px rule.

layout

Paper size: A4 or US Letter. Margins: 1 inch / 25mm all sides.

Single column for letters/proposals. Two column acceptable for white papers.

Page numbers: bottom-right, Inter 400, 8pt.

No headers on the first page.

print color

Always print in light mode: #1a1a1a text on white paper.

The grid texture should not appear in print documents — it's a screen-only element.

Flask icon prints as a stroke outline in black.

WHEN TO USE WHAT

CONTEXT	PRIMARY FONT	MONOSPACE	GRID TEXTURE	DEFAULT MODE
Website / Product	Courier New	Everything	Yes, animated	Dark
Pitch Deck	Inter	Wordmark + product names only	Title slides only, static	Dark
Conference Slides	Inter	Wordmark + code snippets	Backgrounds OK, subtle	Dark
White Paper / Report	Inter	Inline code + product names	No	Light
Contracts / Letters	Inter	Letterhead wordmark only	No	Light
Social / Marketing	Inter or Courier New	Depends on context	Yes, as brand texture	Dark
